

NEWS ADVISORY!

OUTERLIMITS POWERBOATS IS RACE INSPIRED - RECREATIONALLY RAMBUNCTIOUS!

It may be the dead of winter in Bristol, Rhode Island, but Outerlimits Powerboats is cooking up some hot new products for the Miami International Boat Show, February 14-19.

Outerlimits has led the high-performance boating industry in its carbon-fiber, ultra light construction. This technical, aircraft-style material, coupled with epoxy resin, post-cured in a temperature controlled oven, ensures that the finish of each Outerlimits Powerboat is impeccable.

Enter the Outerlimits new SL—the Super Leggera. Ultra Light, Ultra Powerful. Ultra Hot!

“Leggera” is the Italian word for light weight, combined with Outerlimits’ long-standing reputation for strength and durability. Add Mercury Racing’s legacy for power and “Super Leggera” says it all—taking it to the edge with the most reliable, fast and exciting ride on water.

The company created a new World Championship race boat in 2006, which it tweaked for 2007. Outerlimits successfully raced the boat in Europe’s Powerboat P1 circuit and brought the boat into its recreational model selection as well. “We felt that the R&D we did in racing had even more applications in our recreational boat line, so we have been working on the new Outerlimits SL. Our new Italian race team and the innovations of Italian automotive companies gave us further inspiration to create the Super Leggera—the name suits our construction style,” said Mike Fiore, founder and president of Outerlimits.

See the Mercury Racing-powered Outerlimits Super Leggera at the Miami International Boat Show, in slip #210 at the Sea Isle Marina, downtown Miami. Outerlimits Powerboats will also display on the Patio of the Miami Beach Convention Center, Booth #3330.
